Hi, everyone!

In case you didn't get the e-mail, Joe has news about the vacuum pump.

"I went to NREC this morning to do a final check on the X-Labs vacuum pump (the pump we use to make the fusor demo work). It was pronounced dead on the scene. The consensus is that it needs a seal rebuild kit. The very nice people at NREC have allowed us to use one of their pumps for test/demo purposes."
