Everyone,

X-Labs would like to invite you to a presentation about our club, its past projects, and information about our current projects!

If it's your first time hearing about us, X-Labs is a student-run organization at USF. We are a hands-on education group with the twofold purpose of inspiring students and providing university engineering students with hands-on experience. X-Labs accomplishes this through large and ambitious projects such as the development of a USF space program. So far, we have launched several high altitude balloons to the edge of space and flown our own Unmanned Arial Vehicle! X-Labs also designs and builds science demonstrations such as huge Tesla Coils that make lightning and play music.

We are also actively looking for people interested in science and engineering to help us with our current projects. Friday's presentation will introduce you to the club and explain our current club project. If you are interested and know nothing about the club, this is the best meeting to attend. Remember, X-Labs is completely free and anyone is welcome.

The meeting will be held this Friday at 3:30p.m. in ENC3006. This is on the 3rd floor of the Engineering Building closest to the library. There will be pizza, so come early.

Thank you,
Coyt Barringer
X-Labs President
